

Project Sentinel Planning

CLASSIFIED LVL5

This document is dedicated to the planning of Project Sentinel, please see 'Project Sentinel Hypothesis' to understand the mechanics and history of the project. Be aware that parts of it may be outdated.

WID/Clock settings

Observers	Frequency	WID1 (in)	WID2 (out)
2	?	1	3
4	?	1	4
6	?	1	4
8	?	?	?
10	?	?	?
12	?	?	?
14	?	?	?
16	?	?	?

Unfortunately, it seems that Civil Director Alp's design of Wave Irregularity Detector fails at VLF. Notably every ~5 seconds there is an anomalous reading from '0:2 F:? WID1:1 WID2:3', it is a quick flicker followed by an identical one in succession. Possibly it is just a reflection of itself, but it could be a genuine reading. However then the WID settings could be wrong, it could be a number of things.

I have created a transmitter consisting of a 21x12 plain of redstone dust. I activated it and then turned on the receiver; it has been detecting a signal however it continued once the transmitter was off. I tried restarting the receiver however it continued. This signal was not present yesterday which might mean something.
